. Description of changes since the previous time the course was given.

Description of changes since the previous time the course was given.

The course was online using zoom. Instead of a final written exam the examination was through problem sets, individual projects with written report and oral presentation (also over zoom), as well as peer review.

. What are the course's strong points according to the students (summary based on the numerical results as well as their free text answers)

What are the course's strong points according to the students (summary based on the numerical results as well as their free text answers)

N/A

. What are the course's weak points according to the students (summary based on the numerical results as well as their free text answers)

What are the course's weak points according to the students (summary based on the numerical results as well as their free text answers)

N/A

. The teacher's analysis of the course

The teacher's analysis of the course

Only one out of four active students responded to the survey, so hard to evaluate. However, from other feedback from the students that attended the course it seems the new examination method was successful, and the online format not too much of an impediment. One student dropped out after two lectures, citing too heavy workload (the student was following an additional different programme at the time).

. Conclusions as well as suggestions for improvements

Conclusions as well as suggestions for improvements

Having students work on problems together is much harder with zoom than when physically together.
